OBJECTIVE

Seeking a Software Engineering Internship to apply problem-solving, full-stack development, and collaborative engineering skills to design efficient, scalable software solutions — contributing to large-scale, complex technology systems and gaining industry experience in high-performance financial technology environments.

EDUCATION

Bachelor of Technology (CSE) – VNR VJIET

Expected 2028

CGPA: 8.93 / 10.0

SKILLS

Programming	Java, Python, C
Web Development	HTML, CSS, JavaScript, React.js, Node.js, Express.js
Database	MongoDB, MySQL, Supabase
Core Concepts	Data Structures, Algorithms, REST APIs, SDLC, Agile Methodology
Tools / Platforms	Git, GitHub, Vercel, n8n, VS Code, Atlas, JWT, bcrypt

PROJECTS

Habit Tracker	GitHub	<i>React.js, CSS, Supabase, Recharts, Vercel</i>
- Built a cloud-deployed full-stack habit tracking application with Supabase as the backend database and Vercel for continuous cloud deployment, demonstrating exposure to cloud technologies and scalable architecture. - Created interactive daily checklists and a monthly grid view, saving user data to a Supabase database; added a personalized dashboard with real-time weather API integration and custom data visualization charts to show long-term progress. - Designed a responsive, glassmorphic UI using React.js and custom CSS animations for a clean, maintainable, and polished user experience.		
Library Management System	GitHub	<i>JavaScript, Node.js, Express.js, MongoDB, MySQL, REST API</i>
- Engineered a full-stack library management system with custom role-based dashboards for students, faculty, and admins using Node.js, Express.js, and MongoDB — applying end-to-end SDLC principles from requirements to deployment. - Secured user accounts by implementing JWT authentication and bcrypt password hashing, following industry-standard application security best practices. - Developed a clean, responsive frontend using HTML, CSS, and Vanilla JS linked to a custom REST API, handling real-time book checkouts, inventory updates, and relational data management with MySQL.		
RR Restaurant WhatsApp AI Assistant	GitHub	<i>n8n, Gemini API, WhatsApp API, Google Sheets</i>
- Developed an automated WhatsApp AI assistant using n8n workflow orchestration and Google Gemini API, enabling customers to place food orders and receive real-time FAQ responses — demonstrating cloud integration and AI application skills. - Integrated Google Sheets as a lightweight real-time database to track incoming orders and manage restaurant inventory; implemented LangChain conversational memory to retain chat history for a context-aware, human-like customer experience.		

CERTIFICATIONS

- MERN Stack Development Training
- Agentic AI Industrial Training
- Smart Interviews Data Structures Training

ACTIVITIES

- Member of Computer Society of India (CSI), VNR VJIET
- Regular participant in coding contests on LeetCode and CodeChef
